For Immediate Release

ChemImage & Ethicon Partner to Progress the Development of Advanced Visualization Tools in Surgery

An innovative collaboration between experts in molecular chemical imaging and surgery that aims to re-shape the future of surgery

PITTSBURGH, Pennsylvania, March 31, 2020 — ChemImage is a Pittsburgh-based molecular chemical imaging company working to solve important unmet needs in healthcare with breakthrough technology. ChemImage has entered into a partnership with Ethicon, Inc., a medical device company of the Johnson & Johnson family of companies, to progress the development of ChemImage's proprietary visualization and *Awareness of Things™ (AoT™)* Platform for healthcare applications. ChemImage technology can provide clinicians with critical information and situational awareness about the in-vivo environment, with the goal of improving both efficiency of care and patient outcomes. "We are excited to enter into this agreement to bring advanced intraoperative visualization to surgeons to help improve surgical accuracy and safety for patients around the world," stated Jeffrey Cohen, MD, President of ChemImage. "We are looking forward to a long and successful relationship."

###

About ChemImage Corporation

ChemImage Corporation is committed to making the world healthier and safer through dramatic advancements in chemical imaging technologies. The company's proprietary, state-of-the-art chemical imaging sensors, algorithms and analysis software enable solutions to some of the world's most challenging health and safety issues. With performance leading chemical imaging technology, ChemImage strives to provide people all over the world with an *Awareness of Things™* Platform, giving a new level of situational awareness to people in their everyday lives.
